

## Overview

- Flashable SWIR LED bar light
- Wavelength 1650 nm
- Radiation angle 45°
- Integrated LED controller with 4 operating modes
- IP54

Picture similar

## Technical data

### General data

Manufacturer Baumer

### Illumination data

Color / Peak wavelength SWIR / 1650 nm

Beam angle 45°

Operating modes steady light  
steady light with brightness control  
flashed light with PNP sourcing  
flashed light with NPN sourcing

Radiation intensity 1.6 W/sr ±7 %

Recommended illumination distance 50 mm ... 400 mm

### Electrical data

Connectors M12/5-pin male connector

Operating voltage 24 VDC

Maximum flash duration 20 ms

Power consumption approx. 18 W (steady light)  
approx. 34 W (flashed light)

### Mechanical data

Construction design bar light

Dimensions 27 mm x 310 mm x 53 mm

Dimensions luminous area 17 mm x 300 mm

Material of cover glass PMMA (acrylic glass)

Material of housing aluminum (anodized, black)

Weight ≤ 650 g

### Environmental conditions

Operating temperature 0 ... +30 °C  
0 ... +45 °C with thermal connection

Conformity CE  
RoHS

Humidity 30 ... 70 %

Protection class IP 54

**Dimension drawing**

**Principle**

**Steady light**

Current is fixed depending on the respective lighting model.

**Trigger**

Trigger (Pin3) is a high resistance current sink with 0.2 mA for 5 V and 5 mA for 24 V.  
High = 5...24 V=ON  
Low = 0...1 V=OFF

**Brightness control**

DIM (Pin2) is used as brightness control and operation mode switch. It's a high resistance current sink with 0.2 mA for 5 V and 1 mA for 24 V.  
PWM frequency: 3.8 kHz  
Min. exposure time: 5 ms

**Flash light**

Triggered flash light with overdrive current and time-out for LED protection.  
Max. flash time: 20 ms  
Min. flash time: 100µs  
Latency (trigger -> LED ON): max 30µs  
Max. clock speed: 1 kHz  
Max. duty cycle: 25 %

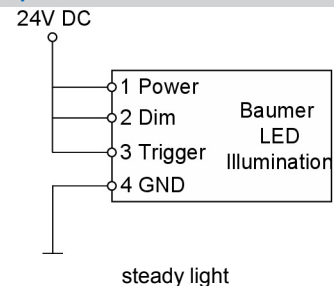

**Pin assignment**

**M12 connector, 5-pin**

Pin	Core color	Description
1	brown	24 VCD
2	white	Dim
3	blue	Trigger
4	black	Ground
5	grey-yellow	not used

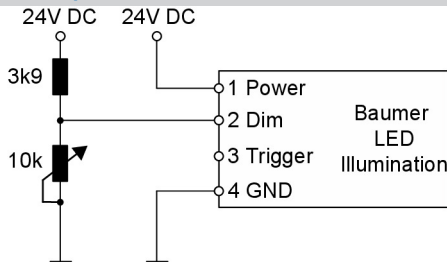

**Connection examples**

steady light

**Connection examples**

steady light with brightness control

flashed light PNP sourcing

flashed light with NPN sourcing

Connection scheme VeriSens®

Connection scheme IDC

**Safety notes**

Read the warning and application instructions carefully and completely before working with this device.

Only operate the illumination in compliance with the prescribed protective measures. It is essential to ensure compliance with the permissible ambient conditions.

- The device is only designed for indoor use.
- **Light:**  
Due to the risk of eye irritation or injury, it is not recommended to look directly into the light source. Due to the non-visible nature of SWIR wavelengths, the product is equipped with a green control diode. This is located in the LED field. Green light from the diode indicates that the light source is operating. The illumination system must be switched off before installation and/or maintenance. The device must not be used if incorrect operation may cause personal injury.
- **Heat:**  
The surface temperature may exceed 60 °C if heat dissipation is inadequate or when the illumination is operated in flash mode with an excessively high duty cycle. Keep away from flammable materials by all means.
- **Electricity:**  
The housing is electrically isolated from the power supply ground. Exceeding the permissible input voltage  $U_{in}$  or  $U_{LED(+)}$  may cause damage to the device or significantly shorten the service life of the LEDs within the device.
- **Usage:**  
Do not apply mechanical stress to the luminous area during operation. This will result in inhomogeneous light emission.
- **Cleaning:**  
The light surface must be cleaned with a conventional glass cleaner and a soft cleaning cloth. Avoid using other cleaning agents as these can damage the device.
- **Installation:**  
To maximize the service life of the LED, it is important to avoid heat build-up. To do so, install the lighting with a proper thermal connection. Be sure to hand-tighten the cables, do not overtighten.
